ISO 27001 Compliance

An ISO 27001 certification isn't just a security measure, it's a statement of trust. It shows clients, partners, and stakeholders that data protection is a top priority. Think of it as your badge of honor (and a great way to stay ahead in the market).
At INT, we do more than hand you a checklist and wish you luck. We walk with you through the entire compliance journey, ensuring your security framework keeps pace with evolving threats.

ISO 27001 Compliance Services

ISO 27001 is the global gold standard for information security management, proving to clients and stakeholders that you take data protection seriously. But achieving certification means meeting strict requirements and undergoing thorough audits. We break the process into manageable steps, guiding you every step of the way to make compliance seamless and stress-free.

Path to Compliance

Getting certified is one thing—maintaining it is what really counts. We tailor the process to fit your business, blending assessment, implementation, and ongoing optimization.

General Timeline

6-9 Months

Discovery
We start by getting to know your business inside and out. This phase is all about understanding your unique security needs and operational quirks and then mapping out your compliance roadmap.

Pre-Audit Preparation
Before the big day (the audit), we help your team align policies and procedures with ISO 27001 standards to make sure you're fully prepared.

2-4 Months

Auditor Onboarding
We bring in an external auditing agency and make sure all required documentation is squared away so your auditor can hit the ground running.

ISO 27001 Audit
The moment of truth. We'll act as the go-between for your team and the auditor to ensure everything runs smoothly during your certification audit.

Post-Audit Wrap-Up
After the audit, we'll focus on addressing any findings and fine-tuning your security practices, ensuring your compliance posture is rock solid.

Years 2-3

Internal Audit
Each year, we'll conduct an internal audit to identify any new security gaps before they become real issues.

Years 2 & 3 Surveillance Audits
Certification isn't a one-and-done deal. We'll continue working with auditors during annual surveillance audits to verify that your ISMS is still in top shape and ISO 27001-compliant.

Maintain Systems & Documentation
Compliance doesn't stop after certification. We help you keep everything up-to-date, regularly reviewing and improving your cybersecurity program and ISMS to ensure long-term success.

Pricing

Costs vary based on scope and complexity, and factors like audit requirements and remediation services can influence pricing. However, we know budgeting is key in the early planning stages and are to help—reach out for a pricing estimate.

INT Inc. is not a cybersecurity compliance auditor or representative of any certifying body. All services outside of the Managed Security Compliance service are contracted directly by the Client.
